COMP440 Game Design

Project 3 Checkpoint: Game Design Document

a. Core Loop in one sentence.

The player has to avoid monsters while trying to escape McDonald's(McDonald's).

b. The Four Systems [Rickey]

1. Lionel - Hiding From Enemies: whether the player is hidden and where.
2. Rickey - Enemy Ruleset: each mascot's/monster's rules.
3. Naomi - Roaming Enemies: each mascot's position and patrol state
4. Aiden - Enemy Senses: what each mascot can see and hear: enemy_position, enemy_movement

c. The Seams

1. The seam occurs where the Hiding from Enemies system and Enemy Senses system exchange the player's visibility and detection states. One system determines how hidden the player is, while the other reads that information to decide how the enemy should react.
2. Roaming Enemies must adhere to the Enemy Ruleset. The Enemy Ruleset writes the logic for the central monster, and the Roaming Enemies must read it and decide how to proceed within those constraints.

d. Art Direction:

- **The world, in one sentence.** A regular McDonald's that has a play place ball pit in a normal world.
- **Palette. [Lionel]** Five colors with hex values. One is the accent, and it appears in almost nothing.
 - #731F24
 - #B39839
 - #C9C1A5
 - #242522
 - #91CBA5
- **Camera and framing [Lionel].** What angle is everything viewed from, and at what apparent scale?

The angle will be viewed from a first-person perspective. Everything will appear larger than the character due to being the size of a child. Tight framing inside the play tubes and ball pit limits visibility, while views beneath tables let the player watch roaming mascots from hiding spots.

- **Light [Aiden].** Direction, hardness, temperature, and whether there is any fill.

- Dark and cold, with bright white or orange lights towards or on the ceiling to lighten areas that aren't dark. A mixture of both hard and soft lighting and no filling in of shadows.
- **Edge and detail [Naomi].** How does an object meet the background, and where is detail allowed to live?
 - The player character is the central subject, with the small amount of lighting coalescing in front of them. The rest of the environment is warped and stretched in the darkness, making the subject (and the viewer, by extension) feel small and confused. Detail exists right in front, but rapidly fades further out, leaving monsters and furniture alike as vague silhouettes, their vagueness utilizing the full extent of the viewer's imagination.
- **Mood, in three words.[Aiden]** Three, not five. Specific enough that two of your classmates could not have written the same three.
Grim, Anxiety, Hysteria

e. **Scope [Lionel] :** What is in, and three cuts. At least one must be a fourth system.

Hiding System - The system tracks whether the player is hidden, which hiding spot they occupy and how long they have stayed there. There will also be a limit to how long a player can hide until the location is leaked to the enemy.

Three Cuts

- **Combat system:** No weapons or fighting; the player survives by hiding and escaping.
- **Inventory and crafting system:** No item storage, material collection, or crafting.
- **Additional locations:** The game takes place entirely inside one McDonald's restaurant; outdoor areas and other buildings are cut.

Roaming Enemies must adhere to the Enemy Ruleset. The Enemy Ruleset writes the logic for the central monster, and the Roaming Enemies must read it and decide how to proceed within those constraints.
